

There are three options to consider when ordering a wig; standard manufacturing, custom manufacturing and the custom hand-made wig.

The Standard Wig

The majority of partially and completely machine-made wigs yields a front hairline looking somewhat round or moon shaped. There is no definition of the recessions, nor does it come completely down to ear fronts, consequently, no sideburn is created. The circumference is a standard 57cm(22 1/2") head size.

The wig can be adjusted down to a 53cm (21") size or up to a 61cm (24") size.

All wigs are available in synthetic fibre, yak hair or human hair.

The yak hair is recommended for a wig needed for heavy use as it is pleasant to wear, durable, and sets well, making it the most cost effective over time.

Custom Manufacturing

This wig allows the machine-made wig to be modified to create a front hairline, giving you definition in the recession area, and complete sideburn. This gives a far clearer definition of head shape and a sharper profile. The head size is a standard 57cm(22 1/2") with allowance for a 2.5cm (1") back head adjustment.

Custom Hand Made Wig

This wig style is made to specific head measurements. It does allow for some fitting adjustments, but these are limited. This wig is recommended for the client who has the larger head, or requires a very specific look.

LACE FRONTS

A lace front can be put on any of the wig styles offered.

Denier of lace is determined by need.

heavy lace: opera

medium lace: theatre

fine lace: T.V. or Film
